ACPI Balanced UCITS Fund
UK Reportable Income
Appendix 1 to the Report to Participants for the period ended 31 March 2017

The information below should be used in conjuction with the Report to Participants in order to determine the excess reportable income attributable to any investor for the period ended 31 March 2017.

Equalisation seeks to adjust the excess reportable income taxed on Investors joining in the period rather than holding units from the start of the year. It does this by adjusting taxable income by an amount representing any accrued income during the period up until the date of acquisition.

How investors should use this information in conjunction with the information in the Report to Participants:

- The figures below are shown on a per unit basis
- Should the equalisation adjustment result in negative excess reportable income, this should be treated as nil taxable income, not a deductible amount on the Investor's UK tax return
- A Participant's excess reportable income over distributions should be included in their UK tax return for the year

I am a UK taxable investor who has held units throughout the entire period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. Equalisation is not deductible in respect of reportable income from units held throughout the year.

I am a UK taxable investor who has bought units part way through the period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. You should also subtract the equalisation factor for the relevant share class and dealing date, as set out below, multiplied by the number of units acquired. Note that if multiple purchases were made during the period these each need to be treated separately.

Purchase of 1,000 units in US$ Institutional Class on 3 May 2016:

Excess Reportable Income per unit (1,000 * 0.0740)	74.00
Equalisation adjustment (1,000 * 0.0074)	(7.40)
Reportable Income	66.60

Equalisation factor

ACPI Select UCITS Funds Plc
ACPI Balanced UCITS Fund
UK Reportable Income
Appendix 1 to the Report to Participants for the period ended 31 March 2017

The information below should be used in conjuction with the Report to Participants in order to determine the excess reportable income attributable to any investor for the period ended 31 March 2017.

Equalisation seeks to adjust the excess reportable income taxed on Investors joining in the period rather than holding units from the start of the year. It does this by adjusting taxable income by an amount representing any accrued income during the period up until the date of acquisition.

How investors should use this information in conjunction with the information in the Report to Participants:

- The figures below are shown on a per unit basis
- Should the equalisation adjustment result in negative excess reportable income, this should be treated as nil taxable income, not a deductible amount on the Investor's UK tax return
- A Participant's excess reportable income over distributions should be included in their UK tax return for the year

I am a UK taxable investor who has held units throughout the entire period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. Equalisation is not deductible in respect of reportable income from units held throughout the year.

I am a UK taxable investor who has bought units part way through the period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. You should also subtract the equalisation factor for the relevant share class and dealing date, as set out below, multiplied by the number of units acquired. Note that if multiple purchases were made during the period these each need to be treated separately.

Purchase of 1,000 units in US$ Institutional Class on 3 May 2016:

Excess Reportable Income per unit (1,000 * 0.0740)	74.00
Equalisation adjustment (1,000 * 0.0074)	(7.40)
Reportable Income	66.60

Equalisation factor

ACPI Select UCITS Funds Plc
ACPI Balanced UCITS Fund
UK Reportable Income
Appendix 1 to the Report to Participants for the period ended 31 March 2017

The information below should be used in conjuction with the Report to Participants in order to determine the excess reportable income attributable to any investor for the period ended 31 March 2017.

Equalisation seeks to adjust the excess reportable income taxed on Investors joining in the period rather than holding units from the start of the year. It does this by adjusting taxable income by an amount representing any accrued income during the period up until the date of acquisition.

How investors should use this information in conjunction with the information in the Report to Participants:

- The figures below are shown on a per unit basis
- Should the equalisation adjustment result in negative excess reportable income, this should be treated as nil taxable income, not a deductible amount on the Investor's UK tax return
- A Participant's excess reportable income over distributions should be included in their UK tax return for the year

I am a UK taxable investor who has held units throughout the entire period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. Equalisation is not deductible in respect of reportable income from units held throughout the year.

I am a UK taxable investor who has bought units part way through the period from 1 April 2016 to 31 March 2017:
You should take the figure stated as per the Report to Participants and multiply this by the number of units held at 31 March 2017. You should also subtract the equalisation factor for the relevant share class and dealing date, as set out below, multiplied by the number of units acquired. Note that if multiple purchases were made during the period these each need to be treated separately.

Purchase of 1,000 units in US$ Institutional Class on 3 May 2016:

Excess Reportable Income per unit (1,000 * 0.0740)	74.00
Equalisation adjustment (1,000 * 0.0074)	(7.40)
Reportable Income	66.60

Equalisation factor
