### Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of the Fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is a risk free investment.
- The Fund has been classed as 4 because its volatility has been estimated as average. The classification is based on estimated historical data of a relevant benchmark and may not be a reliable indicator of the future risk profile of the Fund.
- This indicator is based on historical data, may not be a reliable indication of the future risk profile of the Fund, is not guaranteed to remain the same and may shift over time.
- The Fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up.
- The Fund may utilise both exchange-traded and over-the-counter derivatives as part of their investment policies. These instruments can be highly volatile and expose investors to a high risk of loss.
- As the Fund has exposure to overseas securities, movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease.
- For full details of the Fund's risks, please see the prospectus and supplement sections entitled 'Risk Factors' which may be obtained from the address in 'Practical Information' overleaf.
